

Transshield.

The Shrinkable Fabric™ for Superior Protection.

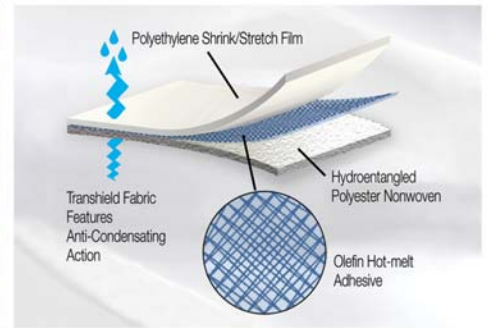

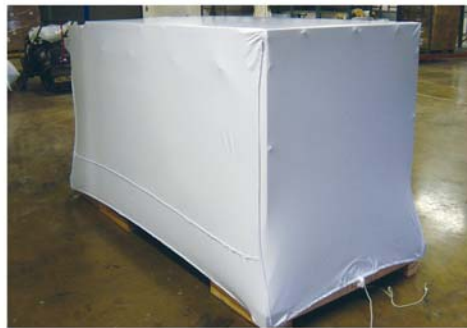

Full Rotor Blade Covers

Root End Covers

Component Covers

Three Layers of Protection

Why Choose Transshield for Wind Power Applications?

Transshield is a unique combination of shrink wrap and fabric that provides premium protection for wrapping products for transportation or storage. This material is made into custom fit covers, tailored to fit your application. They are easy to install, like a simple cover, but the added ability to shrink the cover allows for a tight fit. This results in a smoother transition from factory to field.

Quick like a cover.
Tight like a shrink wrap.
